

Shower project

Team OH-J

Element K: Reflection on the Design Project

In the boys dorms the dorm residents need a place to put their toiletries because there is not a built-in shelf in the communal showers and setting things on the floor is unsanitary. Solving the problem can help the dorm students place their toiletries somewhere without having to set it down on the ground. The problem is that there is nowhere to hang your shampoo and that leads to people putting it on the ground.

We started our design by asking ourselves what the problem is. We needed to figure out what the problem is because building would not be an option if we did not know what we were solving. We started to process what we were learning and sketch out ideas we had for the showers. The group decided on which sketches were the best so that we could start to draw our final sketch. We started to design our prototype and pick out the materials we wanted to use. We talked to our stakeholders about our prototype. We built our final design and tested then recorded the results for our notes. The caddy is being 3D printed and the reason is because using filament is faster and we can use colors if we wanted to in the future.

Our design sketch went well because we were able to see what we needed to change and if there was enough space to fit bottles inside. The rapid prototype went well since we talked about our thoughts and the caddy that we made Mr. K said that it looked good. Our first print did not go so well because it was too small. We got our calculations wrong on the 3D printer and ended up with the wrong size. We printed the box bigger and will test it. Communication did not go well in the beginning and I think that is because we were getting used to the group. Material

gathering went well because our group was able to pick out the materials we wanted for the rapid prototyping.

The group learned that when you test your design it may not always go right the first time and that is why you go back through the design process and record the data. Communication is another lesson because without this tool you can not get work done. We struggled to get a sketch done at one point and that was because we were busy working separately. We needed to work together and get them done and we communicated about the sketches and got them done. The caddy was not an easy project because everyday you were doing something which got hard if you were slacking. The work was great practice for the future and the caddy also helped with group work skills. Always get help from your teacher when you need it so that you can be caught up with your work but, you can also get a better grade for your group and yourself. Working together is the key and if your group member lives on campus and you do not make sure you figure out a way to communicate with them.
