

Element K: Reflection on the Design

As our community project came to a close, it is essential to reflect on our journey to address a problem through engineering. Our main objective was to help our stakeholder, Mr. Gleason, improve his classroom atmosphere and contribute to a better learning environment for students. As we went through many challenges and triumphs, we each learned from our mistakes and motivated each other. We encountered many obstacles throughout the way, from refining our initial idea to gathering the right materials and overcoming barriers during the prototyping phase. However, through perseverance and teamwork, Team Bizzle was able to successfully create a prototype that has the potential to impact someone's life. If we were to change one thing, it would be our time management and communication techniques. To conclude, this experience has taught us valuable lessons ranging from scientific and mathematical principles to interpersonal relationships. These lessons will be significant and important to each of us as we continue to learn, improve, and carry on with our future endeavors.
