

The Athletic Commons at GPS needs backpack organization because the backpacks cause safety issues, as well as creating a choke point which slows down everyone trying to use the athletic commons after school. The design, being the cubbies, can be put under benches and along walls where they will not take up more space than necessary.

Existing Designs/Technologies #1 Backpack Cubbies

Image:

Details:

These backpack cubbies can be put under benches, and along the walls where they are out of the way and convenient for students to store their things. This would clear up all the bags, water bottles, and sports equipment all over the ground which would help make the crowds move faster, and easier for guests to maneuver.

Analysis:

This would be a great addition to the AC because it is not terribly expensive, and it is not going to take up much room. One issue that could come up is how much weight they can hold and what is the best size they should be so we do not waste space. It would be accessible for every student, and it would project this school in a better light because right now it looks disorganized and messy.

Existing Designs/Technologies #2 Backpack Hangers

Source:

<https://www.etsy.com/listing/1582760143/backpack-hanger?gpla=1&gao=1&>

Image:

Details:

These are hangers for backpacks. They could be 3D printed and hold backpacks on a rod off the floor, clearing walkways and making it safer for everyone. It also helps keep the backpacks organized. There is a hook at the top for the hanger to hold the rod and a hook on the bottom to hold the backpack by the handle.

Analysis:

This would be a good fix for the backpack problem in the athletic commons. It could be made into a portable device, so when it is not in use, it could be put into storage. When it is in use, it could hold lots of backpacks, only taking up a small amount of space. One issue that could come up is that these hangers need to be strong enough to hold not only an empty backpack, but a full one. In the description on the website, the hooks were only meant to be for empty backpacks and will break at a certain point.

We measured a standard locker to get an idea for how tall to make the shelves. It was 56 inches tall so our shelves will be around 60 inches so that anyone can access the shelves.
