

Element B: Documentation and Analysis of Prior Solution Attempts

Our school's students that attend strength and conditioning need more time, space, and equipment in the weight room. This is because there is not enough time to productively work out in the gym, with the limited amount of time given. The problem is that all of our solutions either take a faculty member's time or more money to create. The people involved include Mr. B, who is the athletic director, our school's students, these are the students who use the gym and our school as a whole. This is due to the money that would be needed and the space. The issue is occurring during afternoon programming, which is an issue due to a lack of time for students to work out.

A solution to the issue could be to expand the space, allowing more equipment to be added. It can help us be more efficient in the gym, with less waiting around, and more people could get their workouts in. We do not recommend using this method, because we can not change the weight room layout and area easily. These pieces of equipment are very expensive (York Barbell, 2025).

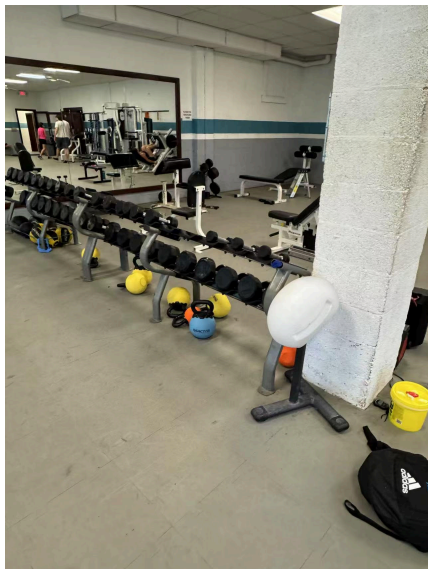

It is very difficult to expand the space underground (Science Direct, 2022). There is no specific law in Virginia stipulating that "schools cannot require teachers to do extra work", but they also cannot force overtime work without compensation at will (LBS, 2025).

The second option is that we can also extend the coach's time in the weight room. It helps us not need to worry about not having time to exercise due to insufficient equipment and a lack of time. It will take up more personal time for the coach. Extending the fitness time can also solve the problem of spending a lot of time due to insufficient equipment. But after the sports time, almost all the students will leave.

Coaches also need to rest and go home. Changing the coaches' working hours without pay is illegal.

The third option is to limit the number of students who can sign up for strength and conditioning, this is an afternoon activity that is provided at our school. It helps make fewer students and fewer crowds in the gym, but if we do that, it will prevent students who sign up late from choosing this sport. Not many afternoon programs have limited numbers of students who can participate. However, only in strength and conditioning did there occur situations where the number of places was insufficient or even excessive. It would be somewhat unfair to directly reduce the number of people used. It seemed unfair to limit students who can participate.

Currently the weight room has a set up of the **images** below:

Dumbbell rack (Center of the room)

Open area with pull up bar

Lat pull down machine, abdominal machine, adductor muscle machine

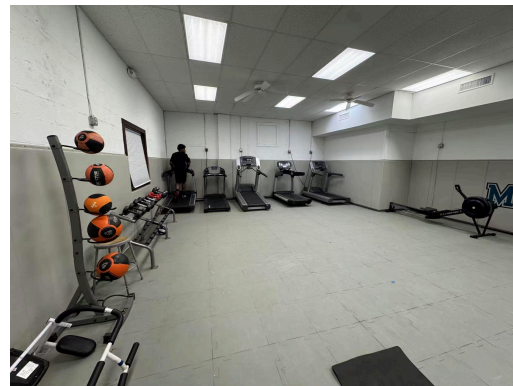

Full view of main weight room

Cardio machines and rower (currently broken)

Boxes for box jumps

Treadmills
