Prior Design Attempt #1 < Shade-a-Rella>

Source-

<https://www.shade-a-rella.com/?srsltid=AfmBOoovKpO0kn4MyTr63wqWnRhZ-DMDBirt0VhvtYJ54yTDW8RUwT6i>

The Shade-a-Rella is seen as a decorative plant shade providing portable shade for plants that aren't able to take the full UV of the sun. It's like a plant umbrella to protect them from being harmed from the sun. The frames are cut by lasers, powder coated, sandwiching shade cloth. Each Shade-a-Rella comes with a rod to hold it above your plant of choice. It was made in the USA. It's a great portable shade for your plants, pets or even people. It also makes a cute decoration for your garden while supplying your plants with the shade they need. The creator of this invention is Shelly Callahan. She originally created this to protect the ornamental Japanese maple tree.

Image-

Analysis- The frame is made out of metal and the material that creates the shade is called shade cloth. This design helps provide shade for your plants outside in your garden. One thing that is unsuccessful is that it is a big and bulky item and you have to move it on your

own, it's not what we're looking for in our project. But it was still helpful for many people in their gardens or just outside plants.

Prior Design Attempt #2 < Garden Cover >

Source-

<https://wholemadehomestead.com/how-to-make-a-shade-cover-for-your-garden/>

This product was designed to be a protective shelter so your plants in your garden won't be harmed by excessive sunlight. It shelters crop plants during the summer so they don't wilt, turn sour and become uneatable. This product was created in the style of a tent which blocks out the heat of the sun while still providing it with plenty of ventilation for the crops. The materials used for this product is 4 2x3x10 wood boards (untreated), two 3 inch hinges plus screws, 16 2.5 inch wood screws, staples, and 2 yards of 48" wide waterproof material.

Image-

Analysis- The frame is made from untreated wood and the waterproof material is a tablecloth from walmart. They look good in the garden and provide shade perfectly while also being waterproof. It doesn't move on its own and we would have to move it from place to place ourselves and it is most likely hard to move because of how big it is.

Prior Design Attempt #3 < Porayhut Pop up Sunshade >

Source-

<https://www.amazon.com/Porayhut-Sunshade-Resistant-Sunblock-Flower/dp/B0C5SJFNST?th=1>

This product protects the plants from 80% of the harmful heat and UV. It lowers temperatures and blocks the plant from direct sunlight. The product size is 90x90x100cm / 36x36x39inch and each one only has 1.6lbs, it can be folded in a 19.7inch carry bag very easily portable. It can be quickly opened for the plant to get sunlight during the day for a couple of hours so it doesn't die from too little sunlight. It also allows the soil to stay moist at all times. It can also be used as a barrier to protect the plant from wind and sand. Shade nets can be used in outdoor spaces, patios, and gardens providing shade for the plant at all times needed.

Image-

Analysis- It has 16 metal stakes to give it durability and so it stays in the ground. It has a metal frame and it has a mesh black material to block the UV from the sun. Yet again it doesn't have mobility on its own, and it looks colorless. Some people might want something a little less plain. So maybe other color options instead of just that one black color.

Prior Design Attempt #4 < Compact VegTrug Shade Cover >

Source-

<https://www.gardeners.com/buy/cmpt-vegtrug-shade-cover-5cd1d0c8/8610404.html?channable=4118756964003836313034303482&srsltid=AfmBOoS5BCrm0DORU5YiPDSEb-bio34uFpooauUgPWegpFBTmPFHb0JZi8>

The VegTrug provides 60% shade for plants that are sun sensitive. This product has a mesh fabric providing water and air ventilation to the plant so it doesn't die from other complications. It has zipper flaps for easy access to the plant if needed to water it or give it some sunlight so it isn't covered up all the time. The zipper flaps roll up and tie so you don't

have to worry about holding it in place while harvesting or watering the plant. The product only comes as a net to put over your plants and set it up, but you can also buy the frame so it is easier to put up.

Image-

Analysis- This product is 39" W x 28.5" D x 35.5" H and it weighs 2 lbs. It has no mobility and is only able to stay in one place. It does have good material to provide the shade for the plant and we could incorporate it in our design.
