myhomebasedlife.com/shade-cloth-for-plants-ultimate-guide-to-optimize-growth/

This image relates to our project because it has plants partially in the shade and partially in the sun. This image provides a sun shade to keep plants from getting too much sun or too much shade. The tray supports at least ten pounds but does move and is not battery charged. This design relies on the sun and its position where the light hits the plants. This design will benefit the plants' need for shade and protect from harmful UV rays and getting too much sun.

Prior Design Attempt #2-

Source: 54 in. Tall Indoor/Outdoor Fir Wood Plant Stand with Weatherproof Asphalt Roof for Patio (3-Tiered)
<https://www.homedepot.com/p/ANGELES-HOME-54-in-Tall-Indoor-Outdoor-Fir-Wood-Plant-Stand-with-Weatherproof-Asphalt-Roof-for-Patio-3-Tiered-CK10-HZ005/318937164>

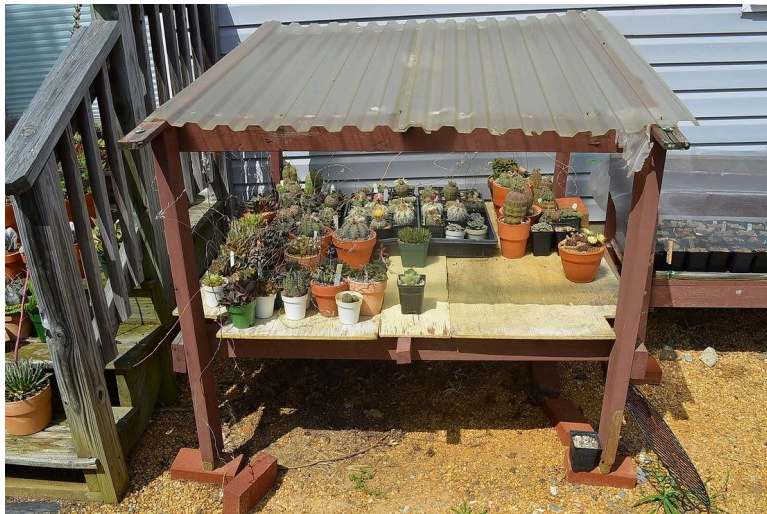

This image relates to our project because it has protection for the plants and allows sunlight and shade onto the plants. This design will hold up to ten pounds and is about 10 x 20. This device is not battery powered but could still provide good sunlight and shade for the plants. If we made some changes to the design and made it provide more shade then it could be a decent design for this project.

tml](https://stewart723.blogspot.com/2014/09/when-you-have-no-greenhouse.html)

This image relates to our project because it provides shade and allows sun to also hit the plants. It is around a 10 x 20 platform however it is a slanted surface and not flat. This design is not battery operated but will support up to ten pounds of weight. This design is not very good and we could use a much better design.

Prior Design Attempt #4-

Source:ASHH Covered 3 Tier Plant Stands

<https://aussieshadehouses.com.au/product/covered-3-tier-plant-stands/>

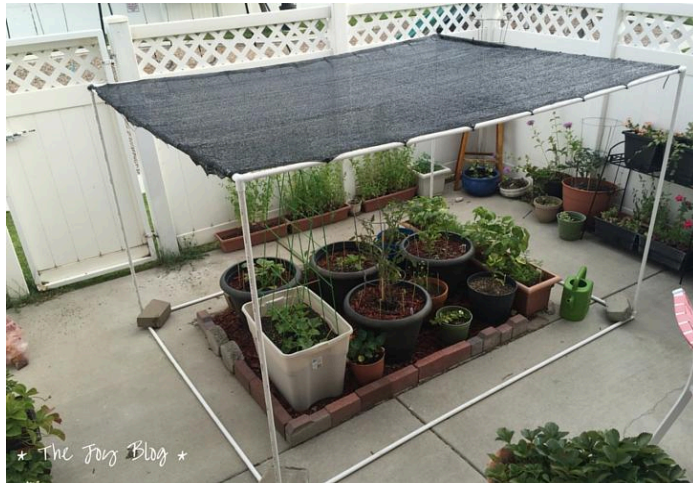

Covered 3 Tier Plant Stand 246cm x 90cm x 170cm with footing pipes, overhead hanging racks, 50% black shade cloth & optional rear cover.

The design relates to our project because it allows sun and shade to hit the plants evenly. This design has layers which are not a part of the rubric. The surface is flat and will support at least ten pounds. It is not 10 x 20 and isnt battery operated. This design is basic and could work well if we made some modifications to the design.

Prior Design Attempt #5-

Source:Free Standing Shade Canopy for Garden

https://www.thejoyblog.net/2016/07/DIYGardenShadeCanopy.html?m=1?utm_term=shade%20garden&utm_campaign=1162496621

This design relates to our project because it will let sunlight onto the plants during the early morning or late afternoon but will block the sun during the middle of the day. The platform looks to be around 10 x 20. This design is not programmable and relies on the sun and clouds. It will support up to ten pounds and is a flat surface. This design could work very well and fix our problem with the amount of sunlight the plants get.
