

Stakeholder 1 gave us an overall score of 16.5. They stated that we had a good idea of talking about improvements for future ideas and also stated that they thought that they could see it being used in the real world. Stakeholder 2 gave us an overall score of 17. They didn't really say how they felt about it but they did score us a 17. Stakeholder 3 scored us an 18. They stated that we needed a bigger motor and a timer, and they thought that the grooves for the strings needed to be improved. Stakeholder 4 gave us a total of 11 and stated that they thought that we did a good job but needed to explain the criteria and the problem better. Stakeholder 5 gave us a total of 20, they said that they didn't think it would last forever due to the sandpaper but they thought it was creative. They stated that it seemed to be affordable and they thought that we did a good job of explaining it. Stakeholder 6 gave us a score of 19 but didn't have any comments about the design for our presentation. Stakeholder 7 gave us a 16 but thought that it was a good design plan and that other design plans due to timing were able to be implemented. Stakeholder 8 gave us a total of 15. They thought that we could overall just improve our focus on the whole project. We needed to do more work on the presentation of the project. Stakeholder 9 gave us an overall score of 17. Said that we didn't really focus enough on the problem definition. Admired our thoughts of improvements. Stakeholder 10 gave us a 19. Told us that we were very knowledgeable about the project as a whole, and admired our acceptance of their feedback. Stakeholder 11 gave us a total of 19. Liked our ability to quickly adjust to the circumstances of available materials.

Synthesis of the Project External Evaluation - All of the evaluators thought that our project idea was very solid. The lowest was an 11 and the highest was a 20. They thought that our design idea was creative and insightful but was unfortunate that we didn't have the appropriate motor for it to work properly. A lot of the evaluators thought that our project explaining the idea was not fantastic and could use some improvement. Many of the stakeholders and evaluators thought that due to the circumstances, they thought we adjusted to them very well and the project was very solid for the availability of resources like motors. The external thoughts helped us improve our design and what we needed to do next time and the improvements we could make. It was nice to have someone outside the box help us determine what would help with improving the project to make it usable.
