

Element J: Documentation of External Evaluation

We will gather feedback from educators, parents, and students who have interacted with the Makey Makey kits during our project. This evaluation will focus on several key areas, including usability, engagement, and educational impact. We will create a structured survey that includes both quantitative and qualitative questions, allowing respondents to rate their experiences and provide detailed comments.

To ensure comprehensive feedback, we will also observe students as they use the kits, taking notes on their interactions, enthusiasm, and any difficulties they encounter. This observational data will complement the survey results and provide a well-rounded view of the effectiveness of the Makey Makey kits. Once we have collected and analyzed this feedback, we will compile a report summarizing the findings, highlighting strengths and areas for improvement. This documentation will not only help us refine our approach but also serve as a valuable resource for future projects involving the Makey Makey kits.

Initial Questions:

#1: How easy was it for you to set up and use the Makey Makey kit? Were the instructions clear and easy to follow?

- Overall, the setup was fairly easy, but some users found the instructions a bit confusing, especially the diagrams. A few suggested that a step-by-step video tutorial would be helpful for visual learners.

#2: How engaging did you find the Makey Makey activities? Did they capture the interest of the students and encourage creativity?

- The activities were highly engaging! Students loved experimenting with different objects to create sounds and were excited to see how they could turn everyday items into musical instruments. Many expressed a desire to explore more creative projects.

#3: What concepts or skills do you feel the students learned while using the Makey Makey kits? Were there any specific learning outcomes that stood out?

- Students learned about basic circuitry, conductivity, and the principles of sound. They also developed problem-solving skills as they figured out how to connect different materials and troubleshoot issues that arose during their projects.

#4: Did you encounter any challenges or difficulties while using the Makey Makey kits? If so, what were they, and how did they impact the overall experience?

- Some challenges included difficulty with maintaining stable connections between the alligator clips and the objects used. This sometimes led to frustration for the students, but it also provided an opportunity for them to learn about troubleshooting and persistence.

#5: What suggestions do you have for improving the Makey Makey kits or the accompanying instructions to enhance the user experience for both students and educators?

- Many users suggested adding more detailed instructions with visuals and examples of different projects. Additionally, providing a troubleshooting guide for common issues would be beneficial. Some also recommended including a variety of materials in the kit to encourage more diverse projects.
