Element J

Element J: Documentation of Evaluation

Stakeholder Evaluation #1

- Mr. O'Farrell
- Justification for how this evaluator is a stakeholder: He's the head of the TV Production Studio, and our design was specifically made for him in the TV Production

Walpole Engineers Design-a-Thon - Judge's Feedback

Judge: POF Team/Project Title: CABLE WALK OVER CABLE CREW

Proficient (3)	Developing (2)	Novice (1)	Score
Learning Goal: Identify and describe a problem that can be solved with a potentially new product or process. - Can you explain what the problem is and the process you used to come to that conclusion? - What kind of input/feedback did your primary stakeholder provide for the problem and/or design requirements? - How did empathy play a role in determining the problem and design requirements? - How did you decide which design requirement was the most important to focus on?			3
Learning Goal: Plan and conduct research by gathering relevant and credible data, facts, and information. - What evidence is there that your current design is based on your observations and interview of your primary stakeholder? - Where did you draw inspiration from for your current design? - What has your primary stakeholder already tried? How did you apply this information to your current design?			3
Learning Goal: Articulate appropriate STEM practices and principles in the design. What kind of research did you do to learn more about the problem and how did you apply that to your current design?			3
Learning Goal: Evaluate solution alternatives and select a final design by considering assumptions, trade offs, criteria, and constraints. What other ideas did you come up with during the brainstorming phase? - How did you make the decision to focus on your current design? - Can you walk through all the different phases/versions that your current design/prototype went through? - What did you learn or take away from all the previous versions or attempts? - Do you have any pictures or physical models of your previous or early attempts? - What do you really like about your current design/prototype? - What are you looking forward to improving in the next version?			3
Learning Goal: Create a prototype. - How did you make your current prototype? - What challenges did you face, and how did you overcome them? - What do you really like about your current design/prototype? - What are you looking forward to improving in the next version? - Were there any limitations or constraints that impacted what you were able to build?			3
Learning Goal: Create and implement a Test Plan to evaluate the performance of the design solution. - What have you learned or what are you hoping to learn from testing your prototype today? - Who is your intended user and how did you consider their input in your Test Plan? - Can you measure any quantifiable constraints from your Design Brief? If so, what is an acceptable measure or result?			3
Learning Goal: Use various engineering communication methods.			3
Judge's Comments: BIG HELP FOR WORKING BEHIND CONSOLE! SAFE WITH GRIPS ON FEET. CUSTOMIZED AS THEY WENT			

Stakeholder Evaluation #2

- Walpole Media
- Walpole Media uses the TV Production for their media and news

Engineering Design students at Walpole High School

Sepulveda, Gustavo <sepulvidag25@wpsma.org>

to Peter ▾

Wed, May 14, 12:40 PM (2 days ago) ☆ ↶ ⋮

Hello Walpole Media. My name is Gus and I'm an engineering student at Walpole High School. My team and I created a cable trough system in the TV Production Studio that allows a person to walk over the cables. We used recycled loose sight panels with 3d printed pegs. When you get a chance, we would love to get your feedback on our project as it is required for our documentation.

Thank you for your time and I look forward to hearing from you as soon as possible.

Sincerely,
Gustavo Sepulveda

Unfortunately, we were unable to receive a response in time

Stakeholder Evaluation #3

- Students of the TV Production
- The Students use the TV Production
- The Students enjoyed our design and were very satisfied with the outcome

Field Expert Evaluation #1

- Mr. Braccini
- He is an expert because he is the head of the STEM Department

Synthesis of the Project External Evaluation

Summarize all of the evaluators' comments in a way that highlights meaningful trends with specifics mentioned. Answer the questions, "What does the external evaluation mean?" and "What are you taking away from the external evaluation?".

External evaluation is the evaluation by other individuals or groups that were not part of the design process. We were evaluated and received feedback from our stakeholders and our design affects our stakeholders. Overall our stakeholders were extremely satisfied with our design. The field experts and our stakeholders were also very impressed with our design and how we were able to make it look.
