Element J

Element J: Documentation of Evaluation

Stakeholder Evaluation #1

Name of evaluator: Mr. O'Farrell

Justification for how this evaluator is a stakeholder: Teaches TV Production at Walpole High School and worked for Fox News as a television production technician

Walpole Engineers Design-a-Thon - Judge's Feedback

Judge: POF Team/Project Title: BOARD HOLDER

Proficient (3)	Developing (2)	Novice (1)	Score
Learning Goal: Identify and describe a problem that can be solved with a potentially new product or process. - Can you explain what the problem is and the process you used to come to that conclusion? - What kind of input/feedback did your primary stakeholder provide for the problem and/or design requirements? - How did empathy play a role in determining the problem and design requirements? - How did you decide which design requirement was the most important to focus on?			3
Learning Goal: Plan and conduct research by gathering relevant and credible data, facts, and information. - What evidence is there that your current design is based on your observations and interview of your primary stakeholder? - Where did you draw inspiration from for your current design? - What has your primary stakeholder already tried? How did you apply this information to your current design?			3
Learning Goal: Articulate appropriate STEM practices and principles in the design. What kind of research did you do to learn more about the problem and how did you apply that to your current design?			2+
Learning Goal: Evaluate solution alternatives and select a final design by considering assumptions, trade offs, criteria, and constraints. What other ideas did you come up with during the brainstorming phase? - How did you make the decision to focus on your current design? - Can you walk through all the different phases/versions that your current design/prototype went through? - What did you learn or take away from all the previous versions or attempts? - Do you have any pictures or physical models of your previous or early attempts? - What do you really like about your current design/prototype? - What are you looking forward to improving in the next version?			3
Learning Goal: Create a prototype. - How did you make your current prototype? - What challenges did you face, and how did you overcome them? - What do you really like about your current design/prototype? - What are you looking forward to improving in the next version? - Were there any limitations or constraints that impacted what you were able to build?			3
Learning Goal: Create and implement a Test Plan to evaluate the performance of the design solution. - What have you learned or what are you hoping to learn from testing your prototype today? - Who is your intended user and how did you consider their input in your Test Plan? - Can you measure any quantifiable constraints from your Design Brief? If so, what is an acceptable measure or result?			3
Learning Goal: Use various engineering communication methods.			3
Judge's Comments: <u>CAN BE USED RIGHT ON SINGLE LIGHT STAND.</u> <u>FLEXIBLE USE</u>			

Stakeholder Evaluation #2

Name of evaluator: Matt Lencioni

Justification for how this evaluator is a stakeholder: He is a student of the TV Production room and uses the clamp hold all the time for projects and assignments.

Transcript of a couple of questions we asked him:

Question 1: How has the light clamp affected your overall experience in TV Production?

Answer: "Personally, it's a game changer. The flexibility that it brings to the table is uncanny. And don't get me started on how easy it is to use."

Question 2: Has the light clamp affected the overall quality of your work in TV Production?

Answer: "Honestly, this creation has just elevated my work to a level I didn't know existed. It's the equivalent of having a portable TV Studio. Total game changer. Level MAX."

Stakeholder Evaluation #3

Name of evaluator: Isaac Mills

Justification for how this evaluator is a stakeholder: Another student at the TV Production room that used to have to hold the board with the light separately to do his assignments. Now with the new addition of the light clamp he is using that instead.

Transcript of a couple of questions we asked him:

Question 1: How many times have you used the light clamp?

Answer: "At Least 6 or 7."

Question 2: With so much experience with the clamp, what do you like about it the most?

Answer: "I like how I don't have to focus on holding the board anymore because the lamp does it for me. It saves so much time getting my assignments done."

Field Expert Evaluation #1

Name of evaluator: Professor Love

Justification for how this evaluator is a stakeholder: Engineering Professor at Northeastern, and has 8 years of experience working as a shoe designer for Reebok.

Walpole Engineers Design-a-Thon - Judge's Feedback

Judge: Prof. Love Team/Project Title: Board Holder

<u>good sketches (dimensioned well)</u>			(3)
Learning Goal: Create and implement a Test Plan to evaluate the performance of the design solution. - What have you learned or what are you hoping to learn from testing your prototype today? - Who is your intended user and how did you consider their input in your Test Plan? - Can you measure any quantifiable constraints from your Design Brief? If so, what is an acceptable measure or result?			
			(3)
Learning Goal: Use various engineering communication methods.			
			(3)
Judge's Comments: <u>excellent problem statement!</u> <u>great product.</u>			

Field Expert Evaluation #2

Name of evaluator: Mr. Boisvert

Justification for how this evaluator is a stakeholder: Been a STEM teacher at Walpole High School. He is currently in charge of the manufacturing class. He has knowledge in the use of materials and construction.

Learning Goal: Use various engineering communication methods.			2.5
Judge's Comments: Good prototype evaluation			

Field Expert Evaluation #3

Name of evaluator: Mr. Braccini

Justification for how this evaluator is a demonstrably-qualified field expert (professionals who spend at least a portion of their time working in a field directly related to your project):

Documentation of the project evaluation, which could include copies of emails, transcripts of conversations, filled out feedback forms, etc.

Judge's Comments: <u>Great prototype evaluation</u> 19 pts			

Summary of Evaluators' Comments – Key Takeaways & Trends.

1. It Makes Life Easier.

Everyone agreed: the light clamp is simple to use and incredibly convenient. Students like Isaac Mills and Matt Lencioni emphasized how it saves time and frees up their hands, allowing them to focus on the creative side of their projects. Isaac specifically mentioned how he no longer has to hold the board manually—something that used to slow him down.

2. It's a Game Changer.

That phrase came up more than once. Matt described it as a “portable TV studio” and said it took his work to a whole new level. The clamp didn't just help—it transformed his experience in the class.

3. It's Already Making a Big Difference.

Isaac said he's used the clamp at least 6 or 7 times, and both he and Matt made it clear that it's become a regular part of how they work. The feedback shows this isn't just a cool idea—it's something people are actually using and benefiting from.

4. It's Got Real-World Value.

Mr. O'Farrell, who teaches TV Production and has worked professionally in the field, saw the clamp as something that fits right into a working studio environment. That says a lot about its practical usefulness beyond just the classroom.

What Does the External Evaluation Mean?

It means this project works—really well. People who use it, teach with it, or understand the industry see clear value in the clamp. It's not just functional; it's solving real problems in a simple, smart way. The fact that both students and professionals responded so positively shows that the clamp has real potential, both now and in the future.

What Are You Taking Away from the External Evaluation?

This evaluation is a huge confidence boost. It shows that the clamp isn't just a good idea on paper—it's making a tangible difference for real users. The feedback confirms that it's easy to use, saves time, improves the quality of work, and fits into both educational and professional settings.
