

Element J: Documentation of Evaluation.

Stakeholder Evaluation #1

- **Name of evaluator:** Miracle Davis
- **Justification for how this evaluator is a stakeholder:** A sophomore and avid reader who used the library book stands to study large textbooks for AP Courses.
- **Feedback:** “Ensure the book stand can hold open large, heavy books without sliding. Make sure it is durable and withstands repeated use over the years. Overall the testing seemed to test the main components of what might make more break the book stand. Good work.”

Stakeholder Evaluation #2

- **Name of evaluator:** Esong Ayompe
- **Justification for how this evaluator is a stakeholder:** He was a past senior at ERHS and was a Student tutor for NHS who regularly set up bookstands for tutoring in the library. His information could help incoming student teachers/seniors for NHS next year.
- **Feedback:** “Great Book Stand! It holds all the books needed and is very sturdy and usable for next year's student tutors. Although, include testing for stability while turning pages.”

Stakeholder Evaluation #3

- **Name of evaluator:** Faith Adewole.
- **Justification for how this evaluator is a stakeholder:** A sophomore who frequently needs and uses library stands to pick out books.
- **Feedback:** She likes the design, and the structure of the bookstand makes it easy to look at book titles and covers to pick them out. She wishes the design would be a bit more eye-catching though. It just looks like a blue stand because the books will cover the ERHS.

Field Expert Evaluation #1

- **Name of evaluator:** Ms. Tatro
- **Justification for how this evaluator is a demonstrably-qualified field expert:** School Librarian who manages the library's reading and resource stations, including maintaining all bookstands.
- **Feedback:** “Great work on the bookstand. This is exactly what I'm looking for. It doesn't slide, it's sturdy, well designed, and holds up books well. I will have to see how well this holds up, since students frequently stack and remove books on bookstands. But other than that it's good.”

Field Expert Evaluation #2

- **Name of evaluator:** UMD Expert: Josh.
- **Justification for how this evaluator is a demonstrably-qualified field expert:** Josh is an Engineering Expert from Umd
- **Feedback:** He liked the project so far, he made sure we tested after adding the grips and the bolts to the base of the bookstand. He seemed intrigued with our mechanisms.

Synthesis of the Project External Evaluation

The external evaluation revealed several meaningful trends that highlight both the strengths of the project and areas for improvement. One major takeaway across all evaluators was the importance of durability and stability. Evaluators such as Eson Ayompe and Miracle Davis emphasized the need for a strong, stable design capable of holding heavy textbooks or regular books without sliding or tipping over. This suggests that additional testing, including pressure and stability trials, is essential to ensure the stand performs well under repeated use. Another common theme was the importance of adjustability and the design. Ms. Tatro and Faith Adewole pointed out the design of the ERHS that we made. Additionally, several evaluators noted that students often press down on or lean against the bookstand, highlighting the need for wear-and-tear durability and real-world usability testing. Overall, the external evaluation indicates that while the concept of the project is strong and relevant to student needs, the execution must prioritize practical durability and user adaptability. The evaluations confirm that students and educators alike would benefit from a product designed not just for appearance or light use, but for the realities of everyday academic environments.
