MyDesign Portfolio

Element J Initial Template

Element J: Documentation of Evaluation

Stakeholder Evaluation #1 (at least 1)

- Name of evaluator: Mr Doffermyre
- Justification for how this evaluator is a **stakeholder**:
He manages the greenhouse.
- Feedback:
"Good"

Field Expert Evaluation #1 (at least 1)

- Name of evaluator: Mr. Steinhorn
- Justification for how this evaluator is a **demonstrably qualified field expert**
He is an engineer.
- Feedback:

"You want to have it clean and make sure the pipes stay clean."

He like the idea of having two pipes, one to have repellent for the plants and one for water, and he likes the idea of having automated things to block holes

Go to Mr. Ostry and recommended its part of the internship program, and this can be part of the internship

He likes the idea about the fire sprinkler system

"How long does it take for mold to build up?"

Field Expert Evaluation #2 (at least 1)

- Name of evaluator: Ms. Smith

Name: _____

Date: _____

Class: _____

- Justification for how this evaluator is a **demonstrably qualified field expert**:
She is an engineer and an engineering teacher.
- Response to feedback form:

Q: Do you think our direction has promise?

A: Yes

Q: Do you have any other requirements or tests you think we should add?

A: I don't have any right now, but will get back to you about this.

Q: Do you think our design will be successful in avoiding / reducing mold? Why or why not

A: I think it will be successful based on the angles you have described in your tests. Your tests are thorough.

Q: Is there any other feedback you would like to give?

A: Your plan is very organized and you put a lot of thought into your design and prototype ideas.

Field Expert Evaluation #3 (at least 1)

- Name of evaluator: Dr. Cadou
- Justification for how this evaluator is a **demonstrably qualified field expert**
He is an engineer and professor at UMD.
- Dr. Cadou believes that the prototype will succeed in being moldless. However, he has concerns regarding the ability of it to water plants as he stated that in its current form most of the water would likely end up flowing out the other end or through the holes towards the end of the pipe instead of through all the holes like we want.

Synthesis of the Project External Evaluation

The evaluators think that our idea and direction is good, and with the exception of Mr. Steinhorn Dr. Cadou, the former of which began talking about our initial brainstorming ideas and internship programs and the latter which had concerns about the water capabilities of our watering system, no one had any additional suggestions or comments.

Name: _____

Date: _____

Class: _____

We are taking this to mean that in any future alterations we should maintain the fundamentals and simplicity of our current prototype and focus more on the watering capabilities of our design.
