

Element J

Durability

The durability of our project is not the best aspect of our design. We think that if you were to put our project in the elements, it would be destroyed. However, if we had better resources and budget, our project would've been better with durability. But since this is just the prototype, it's not going to be perfect the first time as it takes mistakes to get it correctly.

Consistency

We had a problem with the guide for the microwave wheels during the presentation. It kept falling off track and messed up how the base turned, and when someone wanted to see the contraption work, I had to fix the guide. The timer would be a little bit off, but it's still programmable enough to work for the project.

Summary

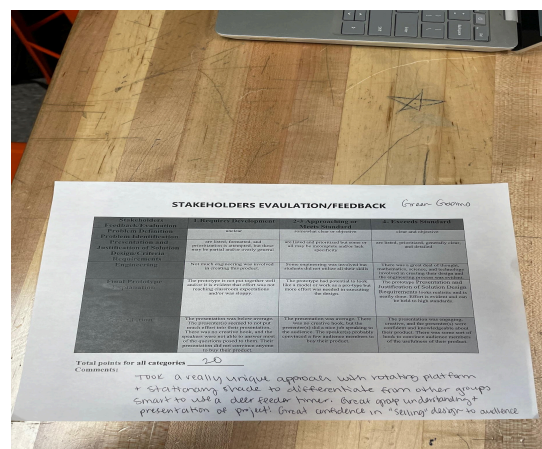

So in summary we had trouble with durability and consistency the main causes of these main problems were lack of materials and time.

Stakeholder Evaluation #1

Name of evaluator: N/A

Justification for how this evaluator is a stakeholder: available for the design a thon and work and they are around the field of engineering and concepts of our projects.

Documentation of the project evaluation, which could include copies of emails, transcripts of conversations, filled-out feedback forms, etc.

Stakeholder Evaluation #2

Name of evaluator: N/A

Justification for how this evaluator is a stakeholder: available for the design a thon

Documentation of the project evaluation, which could include copies of emails, transcripts of conversations, filled-out feedback forms, etc.

Stakeholder Evaluation #3

Name of evaluator: N/A

Justification for how this evaluator is a stakeholder: available for design a thon
Documentation of the project evaluation, which could include copies of emails, transcripts of conversations, filled-out feedback forms, etc.

Field Expert Evaluation #1

Name of evaluator: N/A

Justification for how this evaluator is a demonstrably-qualified field expert (professionals who spend at least a portion of their time working in a field directly related to your project): Engineering teacher at Duke University
Documentation of the project evaluation, which could include copies of emails, transcripts of conversations, filled-out feedback forms, etc.
