

Stakeholder Evaluation

Ms Janet Beaton

E4USA Inspector(Aerospace Engineer)

- She gave us advice in our brainstorming stage about how we could create a suppression system without any Technology if we were not familiar with Arduino.
- Gave us feedback on how using water is a good option for Suppression as it is accessible and widely used in fire protection systems

Ms Jenifer Beaton

A fire protection engineer who are the persons who create and apply systems like ours.

- Helped us understand key components to make the water-based suppression system work

Mr Thomas

E4USA Inspector(Software Engineer)

- Reminded us of the importance of good coding well connected ports to make the two-body system integrate

Field Expert Evaluation

BurnDay Judge 1

Reminded us of some disparities in our code. Told us that one important step back may have been a lack of connection. Maybe even disconnecting

BurnDay Judge 2

- Gave us feedback about how a merit of our system was that it used two inputs to start the notification and suppression system, and how this was very important in order to prevent false alarms
