

ELEMENT J

Your work is presented to field experts and stakeholders via a design-a-thon or showcase event. You should provide the names of each person you received feedback from and how they are experts or stakeholders.

Feedback from our stakeholders:

Coach Holmes: Coach Holmes was quite pleased with the design. He enjoyed our presentation of the project and discussed his eagerness to test our project. He mentioned his plan to use it in future lacrosse practices. He was also pleased with the color and drawn designs on the dispenser as well.

After evaluating the feedback Google form given to Mr. Holmes we can summarize that he did appreciate the Lacrosse ball dispenser but believes that there could be some improvements. From the feedback form, Mr. Holmes said that It would make more to have the lever dispense the ball behind the dispenser instead of on the same side where the ball dispenses as not only would your hand get in the way of the ball but it would also be a safety hazard when used outside during practices when students are collecting the ball using their lacrosse sticks. Mr. Holmes added that If we were able to fix the dispenser for it to balance on its own without pulling the wooden flap up he would also greatly appreciate it as many times when he tested our prototype, it would constantly fall due to the wood flap not being able to hold the weight of the lacrosse balls as well as the weight of the wooden box itself.
