

Component IV: Evaluation, Reflection, and Recommendations

Element J: Documentation of Evaluation

During a meeting with a professor from the University of Maryland, we got some feedback about how to further improve the design.

- Mapping out library is recommended
- Existing products available online on in stores
- High cost solution: cameras
- Mapping library allows for calculating and planning
- Dimensions don't need to be perfectly accurate
- Motorized pivoting mirror for wider range
- Recommended to first implement simple/easy solutions then expand further
- Most online mirror products are easily installable

From their review, we can determine that while many things were done smartly, things could be better. An example of this is trying to find similar options to our goal and have better planning.
