MyDesign Portfolio

Element J Initial Template

Element J: Documentation of Evaluation

Stakeholder Evaluation #1

- Name of evaluator: T. J.
- Justification for how this evaluator is a **stakeholder: Former PE student**
- Documentation of the project evaluation, which could include copies of emails, transcripts of conversations, filled-out feedback forms, etc. **Face to face conversation**
- Described how useful the design can be for the PE students who play badminton and how the efficiency of the design can allow for more badminton play.

Stakeholder Evaluation #2

- Name of evaluator: W. E.
- Justification for how this evaluator is a **stakeholder: They are a past engineering student**
- Documentation of the project evaluation, which could include copies of emails, transcripts of conversations, filled-out feedback forms, etc. **Face to face conversation**
- They are an expert at building tall and stable structures and they complemented our strategy for stability.

Stakeholder Evaluation #3

- Name of evaluator: Ms. Hopkins
- Justification for how this evaluator is a **stakeholder: Runs the PE class, described the problem, and developed the past prototype**
- Documentation of the project evaluation, which could include copies of emails, transcripts of conversations, filled-out feedback forms, etc. **Face to face conversation**

Name: _____

Date: _____

Class: _____

- Ms. Hopkins was the one to spot the badminton birdie problem, create a past solution, and understands the need to have an efficient design. She liked the idea of the structure being collapsable, which can help with storage, transportation, and speed.

Field Expert Evaluation #1

- Name of evaluator: **Dr Cadou**
- Justification for how this evaluator is a **demonstrably qualified field expert: Mechanical and aerospace engineer.** (professionals who spend at least a portion of their time working in a field directly related to your project):
- Documentation of the project evaluation, which could include copies of emails, transcripts of conversations, filled-out feedback forms, etc.

Face to face feedback

Dr. Cadou reviewed our design and had many positive things to say. He liked the construction method of securing the poll with wood and tape, along with the collapsing segments of the stick. He recommended that we iterate on the structure to have it more secure.

Synthesis of the Project External Evaluation

Overall, the stakeholders enjoyed our design and liked our stability and mobility based approach to the project. Most of them left positive feedback about our progress and our teamwork. We accepted any minor criticism well and we appreciate the kind words they left us. However, if we were to change one thing about our design, it would be the stability of the design as it isn't perfect. We would add more sleeves and structural support for the stick in order to secure the whole body.
