

Ms. Shao- she is a biology teacher taking care of the chicken coop, and she is also responsible for the chicken club, which is why she helped give us information about the chickens, taking care of them, and suggestions about our design. She provided feedback, helped with ideas and approved our plans. (there are screenshots of emails in the main folder) Her feedback helped to improve our idea making it more useful and compact

Ms. Harrison- Mrs Harrison is the main caretaker and informant about the chicken coop. She has chickens of her own back home and has a lot of knowledge about them as well as the facilities to host them if they get injured. She was able to assist us with saving 2 chickens - one from being picked on and the other out of fox attack. Thanks to her knowledge we were able to make the chickens safe even during construction.

Mr. Beam- Mr. Beam, our engineering teacher, has lots of knowledge about construction, tools, as well as having the ideal problem solving skills to help guide us through our project. He is very knowledgeable about the engineering process. We gave him our materials list and he recommended alternatives and gave concerns about specific materials. Most importantly, he keeps us on track.
