

MyDesign Portfolio

Element J

Stakeholder Evaluation #1

- Name of evaluator: **Mr O'Farrell**
- Justification for how this evaluator is a stakeholder: **Mr O'Farrell is the teacher of the TV class and will be using Mic Flags almost every time he records**

Good explanation of Prob-prototypes-testing-final product. Good communication with me during process.

Stakeholder Evaluation #2

- Name of evaluator: **Jack Spillane**
- Justification for how this evaluator is a stakeholder: **Takes the TV class**

"Overall the project looks good. I prefer the W cut out over the sliding flags. Both look good and I would use them."

Field Expert Evaluation #1

- Name of evaluator: **Professor Love**
- Justification for how this evaluator is a demonstrably-qualified field expert (professionals who spend at least a portion of their time working in a field directly related to your project): **Engineering professor at Northeastern University, she is Walpole High School's E4USA liaison.**

"Extend sunlight + heat test to multiple days in direct sun, maybe in car since equipment can be stuck in cars"

"I haven't seen your documents but the slides look great! Prototype iteration was well done. :)"

Synthesis of the Project External Evaluation

Our external evaluation was overwhelmingly positive. We got many positive comments and very few critiques. The only critiques that we got was on our testing plan, we could test the fading in a different way. We will use this feedback in future when we design future testing plans. It is important to get testing feedback because some things that make sense to us may not make sense to outside viewers. The feedback from outside viewers can help us key in on potential issues in communication. We also can use the outside feedback to find issues that we did not see as having an extra set of eyes is always good just in case.
