MyDesign Portfolio

Element J

Element J: Documentation of Evaluation

Field Expert Evaluation #1

Dr. Cadou (Engineer):

- Combustion Engine Researcher and Professor at the University of Maryland
- Concerned about the noise it would make
- Worried about the practicality

Field Expert Evaluation #2

Mr. Steinhorn (Engineer)

- Electrical Engineer Practicing in the Field
- Suggested something detachable

Field Expert Evaluation #3

Serena Rudnick-Cohen - BFA Industrial Design Currently employed at Aero Threads in Riverdale Park, MD:

- Squishy material
- Maybe something with slits to hold the hoodie strings in place instead of a hard inflexible material
- It should be flexible to hold the string
- Documentation: From Mrs Rudnick -

Synthesis of the Project External Evaluation

Overall every evaluator is impressed by the idea and supports the designs but they are all worried about the material. It is a trend for some worry in material among each evaluator. The Lebroners group is taking this into account and making iterations to increase practicality. Dr. Cadou talked about noise, Mr. Steinhorn talked about detachability, and Ms. Serena Rudnick Cohen mentioned the hardness of the solution. Making the material softer is our best solution because it should reduce noise, make it easier to use, and not harm anything that it comes in touch with.
