

Element J: Documentation of Evaluation

Our main stakeholder, Mr. Gleason, said that we did well on all of our required components. He complimented the aesthetics the most. Mr. Gleason says that this product did in fact meet his requirements, as it “enhances the scenery of [his] classroom and adds a bright component to the room.” He expresses his feedback on what could have been improved, such as the ease of use by making the plug-in component shorter and improving the aesthetics by making the curtains less prominent.

Mr. Gleason’s students, the English 9th graders, stated that the artificial was “so cute and fits the vibe of the classroom.” They expressed their advice on making the window a little bigger to fit actual classrooms and replicate an actual window.

Our mentor, Mr. Chau Le, has been a helpful advisor that allowed us to successfully complete our project. He complimented our idea on the project, stating that it is a project that is “not too overdone” and emphasizes the window’s pleasing presentation. Mr. Le shares his personal experience of observing the window, stating that he is “drawn to it because it boosts [his] mood.” He emphasizes his appreciation for the art, which ultimately influenced his internal emotions, feelings, and “made [him] feel moved.” As our mentor, he also gave us constructive criticism and feedback, such as the slightly flawed woodwork and choice of fabric. However, Mr. Le found these issues excusable due to the lack of experience.

Overall, we received positive reviews from our product. The features that our customers recommended us to improve were mostly subtle and could be fixed if we had enough time. Based on our customer feedback, we think that our product was a success, as it made our customers happy and satisfied.
