

Design Requirement #1 (HIGH Priority)

"Moves based on desired amount of sunlight"

We need to find technology to be able to detect the correct sunlight a certain plant needs, so the plant can thrive.

Design Requirement #2 (HIGH Priority)

"Programmable for time of day and total time in the sun."

So the plant will get the right amount of sun, and be able to grow and look good.

Design Requirement #3 (HIGH Priority)

"Must use a battery"

This can help the device be portable and easier to use.

Design Requirement #4 (HIGH Priority)

The device must last up to a week

This helps with compatibility of the device so you can use it longer and it requires less maintenance.

Design Requirement #5 (HIGH Priority)

Accommodate a seedling tray

Can be used for several sizes of plants

Design Requirement #6 (LOW Priority)

Hold up to 10 lbs.

We have to be able to make sure that the plants accommodate the device

Design Requirement #7 (LOW Priority)

Assume flat surfaces without other structures

The device will be easier to move around and making the seeds able to grow
