

Element C

We have determined that our design requirements are that

1. Our budget for the project is \$250 as stated by our instructor (Cost)
2. Our design has to work while our stakeholder is away from their house 2 weeks out of the summer as stated by our Instructor/Stakeholder. (Level of Human Interaction)
3. In a Q&A we did with our Instructor/Stakeholder we found that our design has to be durable enough to withstand summer weather and animals such as raccoons, squirrels, and voles that could chew through our solution (Durability)
4. Our design must not use more than 25 parts (Complexity)
5. Our design should not take up too much space so people could walk around it without bumping into it and possibly damaging it or knocking it over (Accessibility)
6. Our design should be simple enough so that it can be easily adapted to accommodate unforeseen issues such as a measurement we forgot to take or a part we forgot to buy. (Adaptability)

The requirements decrease in importance as their number increases. This means that Cost and Level of Human Interaction are the most important.
