Element C

Element C: Presentation and Justification of Solution Design Requirements

Design Requirement #1 (HIGH Priority)

The light attachment mechanism must be able to connect to Mr O'Farrel's light stand as well as having an area to hold the board, making the mechanism all connected (one piece).

This is an important feature to our design because it is needed for the board to be held up, while having the mechanism attach to the board

Design Requirement #2 (HIGH Priority)

The mechanism must be very sturdy.

This is important because in order to uphold the light reflecting board the clamping mechanism can not fall, which would just be a nuisance for Mr O'Farrel and his students.

Design Requirement #3 (HIGH Priority)

The mechanism must be adjustable and user-friendly with the students.

This is important because in order to have the clamp do multiple things it has to be adjustable but at the same time not too complex as it must be user friendly, and easy to master.

Design Requirement #4 (HIGH Priority)

The mechanism must be cost effective. (\$50 or under)

Current options on the web are very costly with the majority of options surpassing the \$150 mark, and the TV studio wants the mechanism to be on the cheaper side, being at roughly \$50.

Design Requirement #5 (HIGH Priority)

The clamp must have a “finger” shaped holding mechanism.

Although this is an option there are other ways that may be more effective to support the light reflecting board.

Design Requirement #6 (LOW Priority)

The mechanism must be able to fasten and unfasten

This is an important piece to the puzzle because it will allow for the clamp to be taken on and off with ease as well as keeping the board in a steady position, preventing shakiness.

Design Requirement #7 (LOW Priority)

The light holder must have the timberwolf logo on it or mr O'farrell name on it

This is important because there will only be 1 light holder and it cannot be lost or stolen so having a name/ label will help prevent that. Additionally, having the logo adds to the atmosphere and shows a sense of pride for the school mascot.

Stakeholder Opinions:

-

In Priority #1 You use the term “tripod” This product will attach to “light stands”. It’s a small word change, but a big difference in TV terms.

I agree with Priority 2

I might move Priority 4 up one. If it is not easy to use I will have a hard time getting the students to use it.

I like #5

#6 might be the lowest. It would be fun to have a logo on it, but not a necessity.

#7 Might be higher and involved with the ease of use in #4. Whatever system you come up with to hold the whiteboard needs to be strong and easy to use.
