

Element G

Bryson Preddy

Detail Tools and Manufacturing Methods used

Step 1 - We had to come with an sketch of the project

Step 2 - Had to decide which sketch we wanted to use as a group

Step 3 - We had to decide what materials we wanted to use to build the design/project

Step 4 - Bryson and Jacob did most of the building and making the project

Step 5 - Martin and Magnus both helped each other put the wiring on the project to make the motor work.

Step 6 - We could use programming because the roof we had was too bright.

Step 7 - Magnus set up the presentation for the people to come around and see.

Details Tools and Manufacturing Methods used

Step 1 - We used Jacob's drill to put the wood together.

Step 2 - We also used a jigsaw to cut the roof out.

Step 3 - We then used a snader to shave the wood down smoothly.

Material name Description Where material was purchased Cost per unit? **We didn't really have to purchase any items other than the motor which was only about 15-20 dollars. The other materials that we used were wood, zip ties, and wires.**

Describe your prototype's functionality to test this attribute? **Our prototype functions by using a button to lift up the roof and to let down the roof then we will switch up the wire to let the roof down. Another way you can function is by doing it manually kind of like a fishing reel, all you have to do is rewind it to let it down or up.**
