Element L: Presentation of Designer's Recommendations

- What could be done next to go further? We could hide the wires more and keep them contained.
- What would you keep if you did the project again? I would keep the basics of the design because it worked well.
- What would you change? We would change the material that it is made out of, so it will last longer.
- What would have made this project easier for you to complete? I don't think anything different would have made this project easier to complete.

Detailed Plans for Implementation of Improvements (L2)

We would hide the wires and keep them contained: this would make the project look cleaner, and more resistant to the weather.

We would keep the basics of our design because it was one of the more successful projects.

We would change the material because the wood is not very weather resistant, and could rot easier than a metal or plastic.

In conclusion our project was really simple to complete in our opinion.
