

- What could be done next to go further with this project?

We could do more research on our system so that way it can work the correct way

- What would you keep if you did the project again?

I would keep our original idea of how the detector was supposed to work and our idea of the model

- What would you change in your current prototype or testing plan?

I would change the kind of tubing that way the water can come out more consistently and quickly

- What would have made this project easier for you to complete?

It would have made it easier if we already had the detector made then all we needed would've been the tubing
