

Content of Recommendations (L1, L2)

Earlier on (in K3, if you completed it) you provided general lessons learned related to engineering design, and now (in L2) you are asked to provide recommendations for continuing work on this project in particular.

Answer as many of these questions as you can with specific recommendations based on your testing data, expert/stakeholder feedback, and any new research you've gathered. These recommendations may include process improvements (how you worked) and/or project improvements (actual design specific decisions you made). Provide recommendations to someone doing a similar project that might build or continue upon your work. For example: "Taking into account <something we did>, we believe doing _____ would improve _____ because _____."

- What could be done next to go further? **We would've gotten better materials and a button to advance it. And make it more sturdy .**
- What would you keep if you did the project again? **To be honest we would probably restart but keep the original design as this is probably the best thing that we have.**
- What would you change? **We would change the materials and the planning.**
- What would have made this project easier for you to complete? **Having more time to plan on how to make the project the best we can make it.**

In order to earn 5's on Element L, you will need specific and detailed ways the project can be improved and a rationale for why they are needed.

- **Better planning, we needed more time to plan on what we were gonna make for our final project to be better.**
- **Better materials, we needed more foundation and power in our motor**

Detailed Plans for Implementation of Improvements (L2)

Now that you have generated a list of specific recommendations with their rationale, go back under each and generate a consistently detailed list about HOW these details will be implemented. Refer back to Element I where you concluded with some of these ideas.

- **We're gonna make more time to plan and not joke around at the beginning of the project and get straight to work.**
- **We're gonna start working earlier and that way we can get the best materials we can use for our project.**
