Element L Initial Template

Element L: Presentation of Designer's Recommendations

Content of Recommendations (L1, L2)

Earlier on (in K3, if you completed it) you provided general lessons learned related to engineering design, and now (in L2) you are asked to provide recommendations for continuing work on this project in particular.

Answer as many of these questions as you can with specific recommendations based on your testing data, expert/stakeholder feedback, and any new research you've gathered. These recommendations may include process improvements (how you worked) and/or project improvements (actual design specific decisions you made). Provide recommendations to someone doing a similar project that might build or continue upon your work. For example: "Taking into account <something we did>, we believe doing _____ would improve _____ because _____."

- What could be done next to go further?
- What would you keep if you did the project again?
- What would you change?
- What would have made this project easier for you to complete?

In order to earn 5's on Element L, you will need specific and detailed ways the project can be improved and a rationale for why they are needed.

Name: _____

Date: _____

Class: _____

To go further with this project, we could implement more refining of the microplastic filters, as well as maybe allocate more time to travel somewhere more reliable for testing. The doc that we tested our ROV off of wasn't what we were expecting, not being able to fully dive the 5 meters, as well as not knowing where the ground was a big disadvantage; one that tested us on our microplastic filters' strength until it broke. Additionally, it would be neat to compete in challenges with our ROVs to truly test which can perform better, either against other teams within our class, or maybe other schools that also participate in the ROV project. Next, if I did this project again I would keep the design aspect of the ROV filters; and if I were to change anything I would make sure to put more allocated time towards the last couple element, since they can fall so out of priority when it comes to post testing. To make this project easier to complete was if testing was way sooner, so that more editing could be done, as well as more time for the elements themselves.

Detailed Plans for Implementation of Improvements (L2)

Now that you have generated a list of specific recommendations with their rationale, go back under each and generate a consistently detailed list about HOW these details will be implemented. Refer back to Element I where you concluded with some of these ideas.

Micro plastic filters refining

- More individual filter testing, so that it can be changed early on
- Time

Elements

- More time with them broken up over homework and classwork so nothing is fallen behind.

Location

Name: _____

Date: _____

Class: _____

- Maybe a different place where the area isn't so shallow for testing

Competition

- Turning the testing of the ROVs into challenges to test their durability and function.
