Element L: Presentation of Designer's Recommendations

Content of Recommendations (L1, L2)

In K3, you provided the general lessons you learned related to engineering design. Now, you are asked to provide recommendations for continuing work on this project.

Answer these questions with **specific recommendations** based on your testing data, expert/stakeholder feedback, and any new research you've gathered. These recommendations may include process improvements (how you worked) and/or project improvements (actual design-specific decisions you made).

Provide recommendations to someone doing a similar project that might build or continue upon your work. For example: "Taking into account <something we did>, we believe doing _____ would improve _____ because _____."

- What could be done next to go further with this project?

Working through this project to a further extent I would advise those who work on it to establish a plan of the cost and materials needed while having data on what substances make a beneficial impact to sustaining/ protecting the concrete.

- What would you keep if you did the project again? **Generate a consistently detailed list** of what would be kept in the prototype or testing plans. (4-5 sentences.)

If we did this project again we would keep our research on how certain ice melters damage concrete and planning for the prototype that would have no damage on concrete. While also maintaining the information that certain concrete mixtures can correlate towards how sustainable the concrete can be. With our knowledge we would

use our guideline of the potential solutions for less damage done to the concrete. Using this we would be able to also follow along the constraints to these solutions and try to compensate for them.

- What would you change in your current prototype or testing plan? **Generate a consistently detailed list of HOW these details would be implemented. (4-5 sentences.)**

Our prototype is pretty straightforward; we wanted to have a heated walkway, so when cold weather occurs, we can heat the walkway to a certain temperature where the snow or ice won't stick. It doesn't need any changes to it, I don't think, the only change we would make is to the testing plan. Which would be testing what temperature is good enough to keep the snow and ice from sticking, and also not overpowering the school's temperature, like where the school's thermostat won't work bc the walkway is using too much of it.

- What would have made this project easier for you to complete? **Generate a consistently detailed list of things that would make the project easier. (You may make a list or use 4-5 sentences.)**

If we actually hired a team of construction workers to do the project, it would make everything 10x easier, especially breaking down the walkway, inserting the pipes and wires to go under the concrete, and actually pouring and sealing the concrete. If we hired a team to do it, the project would be so much easier. Also, they would know what amount of heat is needed, so we can walk on it. And they are experts at it so if they do the project correctly, we won't have to worry about the ice or snow or salt destroying the concrete.

Step L: Presentation of Designer's Recommendations						
	score = 5	score = 4	score = 3	score = 2	score = 1	score = 0
L1. Content of recommendations. Recommendations include _____.	specific and detailed ways the project can be improved and a rationale for why they are needed	specific and detailed ways the project can be improved	some specific ways the project can be improved	one way the project can be improved	vague recommendation(s) for improvement of the project	no recommendations for improvement of the project
	score = 5	score = 4	score = 3	score = 2	score = 1	score = 0
L2. Detailed plans for implementation of improvements. Plans for implementation of improvements are _____.	consistently detailed	generally detailed	minimally detailed and may include one or more caveats	partially detailed and/or overly general	vague/unclear or minimally related to the recommendations provided	not offered
