what could be done next to go further? Something that could be done so that our project would go further is being weatherproof so that it could sit outside in a storm and not be affected by the storm. Another thing we could do is make a better quality rope to help pull the roof up so that it could last longer and be more reliable.

What would you keep if you did the project again? I would keep the wood and roof idea because the wood is durable and reliable and the roof is waterproof.

What would you change? Something I would change is make a better perimeter for the wires and battery so that it won't get messed up by a storm. I would also change the wiring that we did because it is not neat and it could get tangled up in the motor which would mess up our whole project.

What would have made this project easier for you to complete? Something that would have made it easier is planning it out better than what we did because all we had was a sketch and it was not planned or measured out at all.
