Presentation Of Designer's Recommendations

In order to make more progress in this project, we should create a design in Tinkercad in order for our design to have the option to be laser-cut. Cad designs give us options to incorporate machines that manually cut or build our design.

But taking into account of what we have done, we believe that we should focus on communication between groups as a lack of communication led to little progress made over significant periods of time. Since we did not communicate, some groups did not do sufficient work and there was no one to hold them accountable.

We plan to make improvements by incorporating out-of-school communication and updating people who do not understand concepts or were not present.
