Element L: Presentation of Designer's Recommendations

Content of Recommendations (L1, L2)

1. Based on our work, I feel we could have thought of a different way to display the logos on our sliding flag. We used pictures and tape to display our logos on the mic flag but that could lead to issues if the tape starts to fail.
2. We also could have made the sliders multi-sided so that we can carry around 4 panels that have 2 sets of logos instead of 8 panels to have 2 sets.
3. We could make a securing method that can be adjusted to fit on all types of mic holders.

Detailed Plans for Implementation of Improvements (L2)

1. Displaying logos
 - a. We could have an indent on our mic flag, so we would just be able to put the image straight into the mic flag location. We would then put a clear piece of plastic over it and secure it directly into the flag rather than taping it on top.
 - b. We could also use more precise cutting tools to make our logos cut out better as our current cutting method switch x acto knives left some slightly uneven edges.
2. Multi Sided Sliders
 - a. We would need to adjust the sliders so that they would look like an elongated + sign. We would then need to expand the size of the cutouts in the flag so they can fit the new sliders that would be slightly larger. This new slider would be reversible so that they could have logos on both sides, this would lower the amount of sliders needed for a set of logos as 2 sets could fit on 4 panels instead of 8 like before.
3. New Securing Method
 - a. We could make a clamping system that we could tighten or loosen to fit on flags of multiple sizes. We would line the clamp in foam so that it would not damage the flag while we close it. The clamp would be tightened to fit smaller flags and loosened to fit larger flags.
