

Element L: Presentation of Designer's Recommendations

What could be done next to go further?

- Have more options for device storage
- Develop a more final design
- Use more realistic materials for our prototype (tracker and cloth or velcro rather than duct tape)
- Have a website for the device to buy tracker and attachment, but have options to whether having to attach the tracker buy accessories with a special section already in it to store the tracker device.

What would you keep if you did the project again?

- The belt and the watch
- Keep the focus on tracking and alert and not start on so much of a broad focus as kidnapping

What would you change?

- If we had to change anything about the project we would probably go further developing the project by making a more impactful final product that wouldn't have just one option to store it. Not only that but have a better tracker that is more accurate in distance and how far out it can track

What would have made this project easier for you to complete?

- The project would have been easier to do if we had access to more resources and more time to do it. Not only that but having a bigger idea on what we wanted to do to begin with.

List about how the improvements will be implemented:

- We can improve the pocket for the belt by making it more durable and less visible
- Switch to a more detailed and high tech tracker
- Make more options for the clothing item that the tracker would be hidden in
- A smaller tracker so it can fit in jewelry and smaller items
- Have a more final prototype that looks better and can be presented better
