Table of Results:

Name: _____

Date: _____

Class: _____

Test Name	1st Test	2nd Test	3rd Test	Priority of test
Test Results	39x5, 79 inches layout 23x3, 18,9 room	18x12 inches 12x12, 6x12 rooms	6x6 piece of wood, 10 and 18 inches	to test the sizes of the walls to see if they are perfect for the apartment
Number of Trials	We conducted 3 tests For these test we had to check the layout to see if it matched the measurements	We conducted 2 tests, and for these tests we had to see the strength of the cardboard for our project	We conducted 4 tests. For the first test, we tested it about 3-2 times to see if it was stable enough to stay up	to basically see how many tests we had to do on the structure to make sure it's stable
Observations:	after the test we checked and saw that our plans were correct for the layout so that test passed	after the test we checked that the cardboard was good for our project so we built the whole project with the cardboard	after our test, we saw that our structure was shaky at first due to a loose screw	we basically observe the aftermath of the test so we can see what we have to work on afterwards
Pass/ Fail	pass	pass	fail	pass

Summary of the testing data:

Name: _____

Date: _____

Class: _____

Verbal Summary: we conducted three main tests to evaluate different aspects of our project design. The first test focused on checking the layout dimensions to ensure they matched our measurements. We ran three trials and confirmed that our plans were accurate, so this test passed. The second test involved evaluating the strength of the cardboard material by building room models with various dimensions. After two trials, we determined that the cardboard was strong enough, and we used it for our full build. This test also passed. The third test assessed the stability of our structure using wood pieces. After three to four trials, we found the structure was initially unstable due to a loose screw, leading to a failed test. Overall, these tests helped us determine the proper sizing, material strength, and structural stability needed for our project, highlighting areas that required improvement moving forward.
