

Test Name	Smoke detector	Smoke detector	Final house design	Priority of test
Test Results (Values for each test trial with measurement units)	Didn't work	Didn't work	Worked	High Priority
Number of Trials (How many trials of the test did you perform?)	8-10 times	8-10 times	1	High Priority
Observations: What observations did you make about the tests?	The light and sound worked but the actual detection didn't	The light and sound continued to work but the detection did not	The fire was detected within 5 seconds and the water flowed into the model to take the fire out	High Priority
Pass/ Fail	Fail	Fail	Pass	High priority

This is our results for testing our smoke detector and the final design. As shown, we tested our smoke detector multiple times but it still didn't meet the detection requirement. Since we were with another group our final model passed the test.
