

1. **Lighting bolt 1**
2. **Our design did achieve all our requirements except for the weather conditions and programmable. But it meets the perfect measurement the weight the regulation of sunlight, battery operated**
3. **for physical tests We had some easy tasks on creating the buttons on the design- Julian**
 - **defining independent and dependent variables It wasn't that very hard**
 - **only changing one variable at a time and changing it in increments to find a trend There was some challenge but was perfect**
4. **data display and analysis The reviews that we got on our project were good, we only had one bad review which was a sixteen. Most of our reviews were 18's,19's, and 20's.**
5. **data you collected A summary of our feedback is that most people liked the design they wanted: a timer, program, and a cover to protect the wires and batteries.**
6. **the summary of your data**

Most of the say that we just have to add the things that we didn't cause of not enough time
7. **next steps for your design and process from the new information from the test that was conducted. The next steps we plan to take is to add a shelter over the batteries and wires, a lock inorder to keep the roof down on high wind days, and add a program inorder to open and close the device automatically.**
