

Element I:

Testing, Data Collection and Analysis

Our solution did not test very well. We could not see very far because of the wrinkles formed on the mirror's surface. When folding the cardboard to make the "backboard" of the mirror, the cardboard wrinkled a bit, then when we put on the mirror tape, the mirror then took on those wrinkles. The wrinkles in the mirror film had greatly obscured the image in the mirror.

In order to achieve a clearer view, we have decided to get rid of the wrinkles, make the model larger, and test it in the space we want it to be implemented in.
