

Shower Device

Happy Campers

Element I: Testing, Data Collection and Analysis

Dormitory residents and dormitory guests of our boarding school need a device to place their shower products. This is because they would want their shower products to be easily accessible in the communal shower. They would also like to do this without having a personal shower caddy and without setting it on the floor because it is unsanitary. The main stakeholders are the dormitory residents. They need a solution because the showers in the dormitory were not built with a solution to this problem and dormitory residents are not permitted to leave their shower products in the shower area. The only place to put a device in the dormitory showers are on a relatively narrow divider wall of less than an inch wide.

We want our prototype to be waterproof, strong (hold up to 10lb), sit above the floor, and be compact (less than 6 inches deep and 12 inches wide). It should fit five bottles and a razor. We are putting it in conditions like a shower to see if it can handle water without any problems. We want to know if it can handle the weight, up to 10lb, without any issues. We want to be sure it is at the right level for anyone in the shower to reach comfortably. We want to know how many bottles it can handle along with a razor.

What we learned from our data is that on paper we have a very solid design. It can fit all the bottles, it is stable on its own and it is elevated off the floor. We also found out that our design holds more than enough weight to be considered stable. Our design gives dorm residents, one of our stakeholders, a place to put their toiletries in the shower. Our design is elevated off the floor so it will not come into contact with the ground. The only improvement we need to make is

that our design could be more level and parallel to the ground.

This data tells us that our design will meet the needs of our stakeholders because all the tests were successful and what we expected. Only slight “quality of life” improvements should be made but does not affect our stakeholders.
