Element I

	requirement	number of trials	procedure	results
1	The pictures on the mic flag do not fade High Priority	3 Tests, 1 control and 1 testing panel for each test	- use the image you plan on putting on the mic flag - print the image out twice - place both images on separate panels and cover them with a layer of tape - place one image in direct sunlight for 24 hours - have one without direct sunlight as a control panel - compare the images, ask 10 people whether the image appears different on the two panels	Slide: The slide logos did not fade. 1/10 people asked were able to identify a clear change. It meets our goal for the requirement. W Cut Out: The flag remained unchanged, no one was able to tell a difference between the two mic flags. It meets our goal for our requirement.
2	Size of logo must be 75mm by 50 mm High Priority	3 trials	- print out the panel - take a digital multimeter and find dimensions of the panel.	Slide: slide mic flag was 60 mm by 50 mm. It passes as it meets height requirements but fails width requirements. It passes the requirement W Cut Out: w mic flag was 75 mm by 55 mm. It meets our goal as it is taller and wider than it.
3	The mic flags should be durable High Priority	3 drops	- Print out flag - Drop flag from a height of 1 ft - Inspect the flag for any damages	Slide: Flag suffered no damage. Meets our goal. W: Flag suffered minor damage. Passes the requirement.
4	Mic flags should be replaceable when damaged Moderate Priority	3 prints	- Start timer - Slice the 3D model of the flag - Send the sliced flag to a 3D printer and begin print - Once the print is finished glue foam into the hole for the mic holder	Slide: Total time is 7 hours and 10 min. 4 hours and 40 minutes to print the base, 2 hours to print the panels, 30 minutes to cut and attach the foam to the inside of the mic flag. Meets our goal. W: 8 hours and 20 minutes. 4 hours and 50

			- Once the foam is glued in, stop the timer	minutes to print the outside of the W, 3 hours to print the inside of the W, 30 minutes to cut and attach the foam into the inside of the mic flag. Meets our goal.
5	Mic Flag must be able to fit on multiple types of mic holders Moderate Priority	3 trials for each holder	- Find 3 different mic holders of different diameters - Place flag on holder - Shake holder for 1 minutes - Record any movement of flag from initial position (Use before and after pictures)	Slide:  Pass, fit on 2, not on 1 W:  Pass, fit on 2, not on 1
6	Corners of the mic flag must not be sharp Low Priority	3 trials	- Take mic flag and a piece of cardboard - Drag flag on cardboard - Record damage made by flag on cardboard	Slide: Mic flag made minor marks on the cardboard. Passes the requirement. W: Mic flag made minor marks on the cardboard. Passes the requirement.
7	mass of prototype <100g Low Priority	test cases: 3 # trials: 3	- Take a digital scale. - Place the prototype on the scale. - Wait for the reading on the scale to stabilize before recording the value.	Slide: Mean of trials 80 g. Passes the requirement. W: Mean of trials 69 g. Meets our goal.
