MyDesign Portfolio

Element L Initial Template AT - 6 points

Element L: Presentation of Designer's Recommendations

Content of Recommendations (L1, L2)

In K3, you provided the general lessons you learned related to engineering design. Now, you are asked to provide recommendations for continuing work on this project.

Answer these questions with **specific recommendations** based on your testing data, expert/stakeholder feedback, and any new research you've gathered. These recommendations may include process improvements (how you worked) and/or project improvements (actual design-specific decisions you made).

Provide recommendations to someone doing a similar project that might build or continue upon your work. For example: "Taking into account <something we did>, we believe doing _____ would improve _____ because _____."

- What could be done next to go further with this project?

Implementing the design in a real setting and seeing how effective it would be.

- What would you keep if you did the project again? **Generate a consistently detailed list** of what would be kept in the prototype or testing plans. (4-5 sentences.)

- The different sized plates for differing portion sizes.
- Have it be made of recyclable materials.
- Keep the variety of solutions thought up.
- Keep the topic of the project

Name: _____

Date: _____

Class: _____

- What would you change in your current prototype or testing plan? **Generate a consistently detailed list** of HOW these details would be implemented. (4-5 sentences.)

- Different materials to build our design out of because it would allow us to see what materials would work best if our design was to be implemented in a real environment based on cost and minimization of waste.
- Testing how much weight our design can hold because it is important to know if our current plate designs can hold an amount of food proportional to its size
- Testing if our design is compostable because a central part of this project is to reduce food waste, and it would seem appropriate to find a way to include the design of the plates in the process of waste reduction.
- See if students would accept the new design because implementing a new design for the plates in the cafeteria might be controversial to the student base.

- What would have made this project easier for you to complete? **Generate a consistently detailed list** of things that would make the project easier. (You may make a list or use 4-5 sentences.)

- Having more materials to build prototype plates out of like ceramic, or glass so the plates can be reused and washed or wood pulp and paper to make it recyclable/compostable.
- Having different types of food items to place on our plate designs to see if they can hold certain amounts of food.
- Allowing more time for us to work on the project would allow us to work on more fine details like exact plate size, finalizing on what materials the plate would be made of, and testing the effects of the design.

Step L: Presentation of Designer's Recommendations						
	score = 5	score = 4	score = 3	score = 2	score = 1	score = 0
L1. Content of recommendations. Recommendations include _____.	specific and detailed ways the project can be improved and a rationale for why they are needed	specific and detailed ways the project can be improved	some specific ways the project can be improved	one way the project can be improved	vague recommendation(s) for improvement of the project	no recommendations for improvement of the project
	score = 5	score = 4	score = 3	score = 2	score = 1	score = 0
L2. Detailed plans for implementation of improvements. Plans for implementation of improvements are _____.	consistently detailed	generally detailed	minimally detailed and may include one or more caveats	partially detailed and/or overly general	vague/unclear or minimally related to the recommendations provided	not offered
