The people involved in this problem are the students at Marymount, the teachers, and the administration who are trying to supply order and structure to the school. The main issue is students are on their phones during the day. Some unique situations that occur are field trips, when people bring fake phones to turn into the teacher when phones are being collected, or when people use their phones in the bathrooms. The size of the issue is large, but in our opinion it is not an issue to us... it's an issue for the teachers seeing us on our phones during free time, which I don't see as an issue. The problem is happening in school during the study spaces; nobody is on their phones in class, only during free time at school. This problem occurs during school hours, and the problem happens because kids are addicted to their phones and continue to hyper-focus on their devices instead of studying or going over materials for class. This problem happens more often for some people than others, it is different for everyone.

The stakeholder concerns are that students feel the need to hide when going on their personal devices and teachers are concerned about unnecessary phone usage used by students. This problem must be solved now because even though students may feel that phone usage during the day is harmless, teachers, administrators, and researchers.
