Prior Design Attempt #1 - <Yondr>

Source: <https://www.veryondr.com/>

<https://wellesleyps.org/wms/2025/09/22/yondr-pouches-no-smart-device-at-school-form/>

A Yondr pouch is a secure, lockable fabric case designed to hold personal mobile devices. Phones are turned to silent/airplane mode and placed in the pouch upon entry. The pouch is locked with a magnetic device and unlocked at designated stations, often located at exits. Roughly 2 million students using them daily. The benefits are increased in-person interaction, reduced cyberbullying in schools, and enhanced focus during performances. While the idea behind them is to help people stay focused during class, they also come with several problems that must be addressed. One issue with Yondr pouches is that they limit students' phone access in an emergency. If something happens, it can be hard to contact someone or get help quickly.

Prior Design Attempt #2 - <Phone storage bin>

Source: <https://www.pochar.com/products/c1-h>

<https://www.amazon.com/Lawei-Organizer-Teachers-Classroom-Finishing/dp/B0CZ73HXJ9>

Teachers place phones in bins in classrooms to ensure students are paying attention in class. Students would turn in their phones at the beginning of class while phones would be teacher-monitored rather than school wide. It helped to prevent students from scrolling through social media and sending harsh messages during the day while also showing a decrease in classroom distractions. Overall, it worked well in individual classes and plus the cost is relatively inexpensive and affordable. But, a federal survey of principles back in 2016 noted that schools with cellphone bans reported higher rates of cyberbullying than schools that allowed cellphone use.

<https://www.nytimes.com/2023/10/31/technology/school-smartphone-bans.html#:~:text=Do%20school%20cellphone%20bans%20work,the%20phones%2C%20the%20study%20said>

Prior Design Attempt #3 - <Phone lock box>

<https://mindsightnow.com/products/phone-lock-box?srsId=AfmBOoryhZAdQmxIxurltghQoZ3s4eeDVm1rTbBRsZhK1LM3zmlr991k>

Kid-safe lock prevents forced openings. Charging slot lets you charge while locked. It is supposed to reduce screen time, reduce distractions, supports focus at school, or while studying, and encourages quality time with family and friends. It attempts to build healthier screen habits, improve productivity and focus, and strengthen real-life connections. It is portable, compact, and tamper-resistant. It gives you peace of mind knowing your phone is out of reach. It is unsuccessful because it is still a barrier in the way when there's an emergency and you need to contact help.

Prior Design Attempt #4 - 36 Pocket Charts for Classroom Cell Phones

Source: Vorat. This is an emporium of supplies that offers affordable products for a variety of industries.

<https://www.voratat.com/product-p-793186.html>

This is a phone holder that is hung from a wall. It allows students to place their phone in their designated pouch. It has transparent pockets which have numbered stickers you can assign students. The phones are easily on display, meaning they can still be a visual temptation. It is easy to take phones out of the pockets and it is easy to put a fake phone in there as well. Unsuccessful.

Prior Design Attempt #5 - <insert name of prior design attempt #5>

The Phone Shield Is a classroom tool designed to reduce distractions by blocking students' phones from receiving signals. Students place their phones in special signal-blocking pouches, allowing them to keep their devices without being able to use them. The main idea is to prove focus and classroom engagement while giving teachers an easy, non-confrontational way to manage phone use. The phone shield design is not fully effective in addressing phone use problems in schools because it relies heavily on student cooperation and can be easily worked around when students hide devices or bring in extras. It also requires teachers to monitor compliance, which can create the same enforcement issues it aims to avoid. In addition,

concerns about emergencies, costs, and logistics of managing pouches make schools less likely to adopt them.
