Element B: Documentation and Analysis of Prior Design Attempts

Prior Design Attempt #1 - <Piedmont Center's original hideout #1>

Source

The document from Piedmont Wildlife Center showcasing the rabbit's original enclosure with pictures.

Image

Details

The document sent from Piedmont Wildlife Center is the source. It is made from untreated wood which is safe for rabbits, has a safe ramp, and is overall an area for them to hide well and feel safe.

Analysis

Name: _____

Date: _____

Class: _____

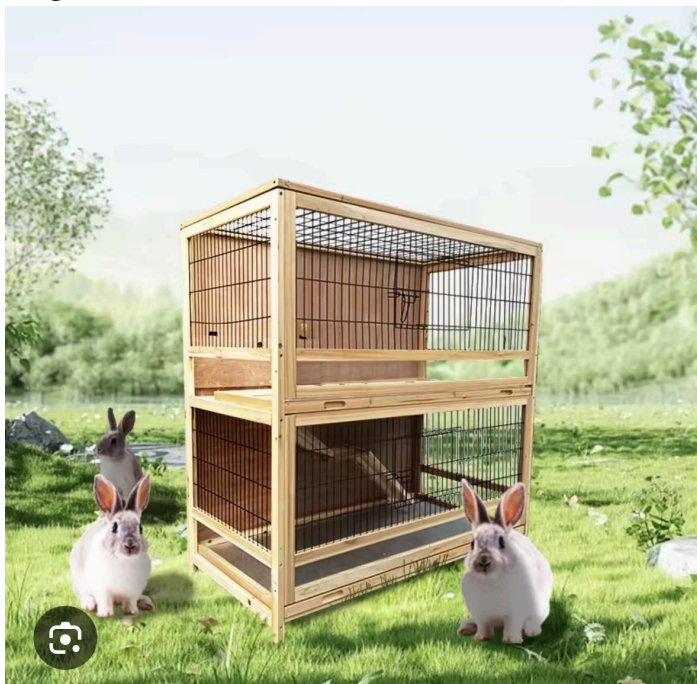

It is too bulky and hard to move, unsafe from the hinges and metal pieces, most likely uncomfortable from the hard wood bottom, not very enriching, and hard to clean or see the rabbits.

Prior Design Attempt #2 - <Wooden Rabbit Cage #2>

Source

<http://unimeleducacion.org/?n=30071092141540>

Image

Details

Bamboo is an eco-friendly material that is safe and sturdy enough for rabbits to chew on and live in. Bamboo is in a great surplus and is easily obtainable including growing at very quick rates.

Analysis

It is bulky and hard to move, including not providing a lot of hiding space for the rabbits.

Prior Design Attempt #3 - <Indoor Rabbit Housing #3>*Source*<https://bunnyvault.com/indoor-rabbit-housing/>*Image**Details*

It is a rabbit house that seems to be constructed with pvc pipes and chicken wire.

Analysis

It makes the rabbit visible, but it is not dark enough to make the rabbit feel safe , the plastic pipe material may not also be good for the rabbit to chew on.

Prior Design Attempt #4 - <insert name of prior design attempt #4>*Source*<https://www.ebay.com/itm/305719918905>

Name: _____

Date: _____

Class: _____

*Image**Details*

It is made of wood, consists of ramps, a tunnel, lookout areas, and is very decorative.

Analysis

It is hard to clean and potentially hard to get the rabbits, but it provides a lot of different areas and ways for them to use it. It also looks nice for the visitors and is a safe material for the rabbits.

Prior Design Attempt #5 - <Wooden Rabbit Hideaway #5>*Source*

Details

This rabbit hideout is a shelter designed to give rabbits a safe place to hide, rest, and feel secure. This hideout is made from untreated natural wood, which is safe for rabbits to chew. This design includes multiple entrances, allowing rabbits to enter and exit easily.

Analysis

Although this rabbit hideout meets the requirement of providing a secure space, it is not fully successful as a long-term housing solution. Wood absorbs urine and moisture, which could lead to odor buildup and germ growth if not cleaned frequently. Additionally, rabbits chew things a lot, which can quickly damage the structure, reducing durability and potentially creating splinters.
