### How to use this template

### Element B: Documentation and Analysis of Prior Design Attempts

#### Prior Design Attempt #1 - Mudbuster

*Source*

<https://store.dexas.com/products/mudbuster%C2%AE-as-seen-on-tv-new-colors>

Dexas Online Store

*Details*

The mudbuster pet paw washer is a cylindrical container with internal bristles that uses water to scrub dirt from a dog's paws through manual insertion and twisting.

**Name:** Dog Paw Washer

**Date:** \_\_3/10/2026\_\_\_\_\_

**Class:** \_\_pd 2\_\_\_\_\_

### *Analysis*

The mudbuster design is limited because it does not include an integrated drying mechanism and may allow water to drip outside the container during use, failing to meet the team's goals of no spillage and drying.

### **Prior Design Attempt #2 - MuddyMats**

#### *Source*

[MuddyMats official website](#)

#### *Image*

#### *Details*

A slightly abrasive mat with bristles that can scrub at Dog's paws as they come inside from the outdoors.

### *Analysis*

This mat has no water or cleaning solutions, which automatically decreases how effective it can be at actually cleaning a dog's paws.

### **Prior Design Attempt #3 - Wet Towel**

#### *Source*

Personal Reference

#### *Image*

**Name:** Dog Paw Washer**Date:** \_\_3/10/2026\_\_\_\_\_**Class:** \_\_pd 2\_\_\_\_\_

### *Details*

Humans hold a towel that is wet with water, no soap, and scrubs at each of the dogs paws individually. The towel is abrasive enough to remove dirt and other particles.

### *Analysis*

Only water is used, soap is not, meaning contaminants other than dirt or salt, like road chemicals or oil, are not removed from the paws. Additionally, though the towel is abrasive, it is limited in its ability to clean crevices of a pet's feet because of the size of human fingers.

**Date:** \_\_3/10/2026\_\_\_\_\_

**Class:** \_\_pd 2\_\_\_\_\_

### *Details*

To use this device you have to fill the pouch with hot water, optionally you could add some soap then pull the device back and forth to clean the device.

### *Analysis*

To dry the paw you have to get a separate towel which means the device itself has no drying mechanism, therefore limiting its ability to fully clean a dog's paws.

### **Prior Design Attempt #5 - UpRoot Paw Cleaner**

The device contains a cleaning solution, a mechanism to secrete the solution, and an abrasive brush that can distribute the solution, work it into a dog's paws, and pick up contaminants.

### *Analysis*

This is a cool solution, and it likely has the ability to clean most contaminants off of a dog's paws, though the scrub brush may be too abrasive if the bristles are made of plastic or another fiber, and be bothersome to a pet's paws. Additionally, there is no effective way to dry the pet's paws after using the device.
