

Element F

Our design should be able to help with the efficiency of cancer detection. It is very likely that the AI should be able to do this because there are already AI that are capable of detecting cancer at an early stage, based on data fed to it of what cancer looks like in scans. Newer forms of AI are starting to stray away from general uses. Specialized analysis tools can focus on data revolving around identifying how to treat and care for patients based on the results of the analysis. Some AI approved by the FDA deals with healthcare specifically. All of our collected evidence shows that our AI could work, however, a larger concern these AI could have is that it failed to identify unique situations that the AI aren't able to handle, like specific forms of cancer.

Landi, Heather. "AI Can Crack Open the 'black Box' of Effective Mental Health Therapy at Scale, Study Finds." Fierce Healthcare, 26 Jan. 2024, www.fiercehealthcare.com/ai-and-machine-learning/ai-can-crack-open-black-box-effective-mental-health-counseling-scale-study.
