Element F Initial Template

Element F: Consideration of Design Viability

Judgment about Design Viability (F1)

Design Viability Description	Connection to Design Requirement	Credible Evidence?
The solution has frame durability	Design can stand up without help from someone or something else .	Research chapes, buildings and built objects in general and see how and why they stand up on their own.
inhabitability	Does the property look like someone can live in it?	We looked at the typical university students dorm room, and put in place furniture that they all had (Beds, desks, posters, etc.)
Our design effectiveness	Our design can alert the fire.	Our design plays an alarm when the fire is detected in a quick amount of time.
Our design is flammable	Our design must be able to light on fire to see if our design can suppress the fire.	Our design when contacted with fire will catch on fire and spread around the house to see the effectiveness of the suppression systems and detection systems.
Our design is cost effective.	Our design must be under 750\$ dollars.	Our design cost less than 750\$ with all our materials
