

Element F: Consideration of Design Viability

We evaluated the feasibility of our project by examining the cost, material availability, and ease of getting materials. We conducted price comparisons to ensure our design stayed within the school's budget. Additionally, we assessed the height and space needed for our materials, prioritizing the use of plants of different sizes and the water needed. Our discussions with the staff confirmed that the rain gardens would not hinder school beauty or functionality. Based on these factors, we determined that our design is viable and beneficial for long-term use.
