Element F: Consideration of Design Viability

Judgment about Design Viability (F1)

Design Viability Description	Connection to Design Requirement from Element C	Credible Evidence?
<i>Example:</i> The solution is inexpensive	<i>Example:</i> Design does not cost more than \$X	<i>Example:</i> Create a table of costs for each component of the solution.
The solution is inexpensive	The design must not exceed the budget limit.	Create a table listing the cost of each component (IV tubing, PVC pipes, connectors, etc.) to show that the total cost stays within budget.
The plants are effectively provided with water.	The system must consistently and steadily provide the plant with water.	Conduct tests to measure water flow rate through the tubing and check if it aligns with plant watering needs.
The plant is receives enough light	The system must not cover the plant's light source.	Use a light meter to measure light intensity or observe the plant's location

		relative to sunlight.
The Plant has adequate nutrients	The system must not disturb our attractive hurtful properties towards the plants such as mold or pests.	Regularly inspect the plant for pests and damage; use sticky traps.
The structure is stable and won't tip over	The system must remain upright and balanced or hoisted in the area the plants are in.	Perform a stability test by adding weight or maybe sand to act as the water and observing if it stays balanced.
