

Element E: Application of STEM Principles and Practices

Me and my group used certain STEM principles and practices in our process of installing rain barrels into the school garden. Some of these STEM practices include research, communication with experts, and budgeting. Our team sought out expert advice from the University of Georgetown, and were ignored by the urban planning team. Instead of getting advice from someone from the urban planning team of Georgetown University, We talked to a member of the DCI gardening club to ask him what he thinks about our project. We got some advice on how to advance in this process and we have been chatting ever once in a while
